

EXPERIENCE

AppFolio · Product Manager, Rental Applications & Payments

Jan 2023 – Oct 2026

Property-management software for 23,000+ customers. Sole PM for the rental application line, across two codebases.

- **Owned the payment experience for \$200M a year in application fees.** 70% of applications carry an embedded payment. Built checkout, assumed-success logic, and the failed-payment recovery path on AppFolio's internal payments API. Reached a **99% first-time payment success rate**.
- **Served a two-sided payment:** applicants pay through the checkout flow; property managers are billed monthly for the service, **nearly \$20M in revenue** last year. Set strategy and roadmap so both sides succeed.
- On the payments team, sized offline rent from accounting receipts and interviewed renters on why they pay offline: irregular gig pay, unbanked renters driving 15–30 minutes for certified funds, 2–3 day ACH. Led to **rent-split payments with Flex** and a live **digital certified-funds partnership**.
- Designed a person-level model so one person can be a prospect, applicant, and resident, keeping payments split between people on the right ledger.
- Rebuilt the rental application end to end. Submission rates went from **44% to 70%**, and properties on the new flow fill vacancies **3.4 days faster** than offline workflows.
- Built a secure applicant-data API and launched it with Zillow. Reached 70% customer adoption, then **pushed to wind it down** when the frictionless path buried property managers in unqualified applicants.
- Shipped follow-up for incomplete applications inside the authenticated app, not over email or text, so every interaction stays auditable for screening compliance. Customer satisfaction on rental applications rose 18% after launch.
- Built a jobs-to-be-done map from 50–100 customer calls a year. Run a spec-driven process: behavior defined before code, every release gated by tests and evals.

Lively · Data Scientist → Product Manager

Nov 2019 – Dec 2022

HSA platform for tax-advantaged health spending, offered through financial-institution partners.

- **Built the money-movement platform:** bank and card-network transfers, processor integrations, ledgers, and the partner data model. Financial-institution partners could offer compliant HSAs without building their own infrastructure.
- Worked with our second partner bank's executives to scope the multi-tenancy changes our product needed. Captured rising Fed funds rates: **~90 bps more yield on AUM**, plus room for future partners.
- Built partner APIs and migration pipelines that moved **\$50M+ in HSA assets** between financial institutions with **zero data loss**. Cut the work from two migration teams to one.
- Stood up the company's first data-science function and data-services platform; promoted to PM in 2021 as the work became the roadmap.

Oracle · Data Scientist, Applied Research

Sep 2017 – Sep 2019

- Rebuilt model validation on a representative U.S. population sample, correcting a skew that distorted model performance. Automated a data pipeline that had taken two analysts full-time.

SELECTED WORK

Brava (bravamade.com). A complete collegiate recruiting toolkit for youth athletes, built with my brother. Coach-verified stats, benchmark rankings, AI-assisted production pipeline. Shipped end to end.

AbiertoClaw (github.com/be-ns/AbiertoClaw). Open-source AI assistant over iMessage for our family calendar. Lets your personal agent find the best free model for itself every day, or fall back to a local model.

SKILLS

Payments: checkout, failed-payment recovery, money movement, ledgers, processor integrations, partner APIs

Data: SQL, Python, experimentation, pipelines

AI: RAG, tool use, agents, evals · OOUX

Writing: Published Poet (opol.space, 2026)

EDUCATION

B.A. Communication Studies, Westmont College · Data Science Immersive (ML), Galvanize
