

SUMMARY

Product manager with a data-science foundation who builds software that fits how customers think and handles the work they don't have time for. Nine years across applied ML research, early-stage fintech, and vertical SaaS—going deep on jobs-to-be-done and shipping reliable, measurable products, including agentic systems grounded in a real model of the customer's domain. **Outcomes: \$50M+ in assets migrated, vacancies filling 3–5 days faster, submission rates nearly doubled.**

EXPERIENCE

AppFolio — Product Manager · Rental Applications

Jan 2023 – Present

- Led the complete rebuild and launch of the rental application—a legacy, unsaveable form—into a modern, resumable, account-based experience; **vacancies now fill 3–5 days faster and submission rates have nearly doubled.**
- Built performance reporting and direct integrations into AppFolio's proprietary AI stack, giving property managers clear visibility into their lead funnel for the first time.
- Drive discovery with a **JTBD → OOUX → Spec Kit** method to ship agentic features that reason over a structured model of the domain (leases, deposits, compliance rules) rather than relying on prompt guesswork.

Lively — Product Manager ← Data Scientist

Nov 2019 – Dec 2022

Promoted to Product Manager in 2021 · HSA fintech, SF Bay Area

- Built the APIs and migration flows that moved **\$50M+ in HSA assets** from major financial institutions onto the platform—giving partners a compliant HSA offering without building the infrastructure themselves.
- Stood up the company's first data-science function, giving an early-stage team visibility into how product decisions moved core metrics; grew the work into product management as the company scaled.

Oracle — Data Scientist, Applied Research

Sep 2017 – Sep 2019

- Built an automated evaluation system that ran hundreds of tests against model updates—replacing gut-feel calls with statistically significant measurement of whether each change actually improved the model.
- Worked across large-scale consumer-signal data (location, behavioral, real-world) used to model and predict purchasing behavior.

Seifer, LLC — Founder

2016

- Solo-founded a men's athletic eCommerce brand: developed a first carbon-neutral athletic fabric (recycled polyester + eucalyptus), built a 20-month P&L / COGS model, and led design, product development, and marketing analytics through launch.

HOW I WORK

Deep JTBD → OOUX → Agentic Spec-Driven Development. Start from the customer's real pain, not the technology. Map the system of truth with Object-Oriented UX, then turn it into a Spec Kit (reasoning, constraints, execution) so agents act inside a real model of the customer's world—no hallucinations, measurable success.

SKILLS

PRODUCT

Jobs-to-be-Done discovery · Object-Oriented UX (OOUX) · agentic / spec-driven development · roadmapping · funnel & conversion optimization · product analytics

DOMAINS

PropTech & vertical SaaS · fintech (HSA / financial data) · applied ML research

SELECTED PROJECTS

Designed and shipped five free, no-account web tools at bensiverly.com (Native Plant Finder, Life Strategy Matrix, Decision Assist, and more)—end-to-end product judgment from problem to working software.

EDUCATION

B.A., Communication Studies — Westmont College · 2010–2014

Data Science Immersive, Machine Learning — Galvanize · 2017

TECHNICAL

APIs & system integration · data modeling · experimentation & statistics · SQL · Python · AI agents / LLM-backed product systems

APPROACH

Customer-obsessed, data-fluent, ships things that work · comfortable building alongside engineering
