EXPERIENCE

AppFolio · *Product Manager, Rental Applications & Payments*

Jan 2023 – Oct 2026

Property-management software for 23,000+ customers. Sole PM for rental applications: 9M+ starts and $200M in fees a year.

- Inherited a legacy rental application with a **44%** submission rate. Upload and device data showed why: applicants started on phones, photographed pay stubs off other screens, and could not resume elsewhere. Rebuilt it end to end: save-and-resume on a light identity layer that guards sensitive data, up-front questions that assemble only the application each person needs, and a consumer-grade design system. Submission rose to **70%**, vacancies filled **3.4 days** faster, and customer satisfaction rose **18%**.
- Built a verified jobs-to-be-done map from **50–100** customer calls a year and kept it as a searchable corpus with an internal RAG tool on top. Every roadmap bet traced back to what renters and property managers said they needed.
- Set the checkout success metric and iterated after launch. Modeled payment-callback timing, moved the wait window from **8s to 12s** to cut timeouts from **~8% to ~4%**, and sent the rest a tokenized recovery link: **99.1%** payment completion.
- On the payments team, sized offline rent from accounting receipts and interviewed renters on why they pay offline, from irregular gig pay to no bank account. Turned it into a narrative for payments leadership, who funded teams to build rent-split payments and a digital certified-funds partnership.
- Launched a secure applicant-data API with Zillow and reached **70%** customer adoption. Pushed to wind it down when the data showed it buried property managers in unqualified applicants.

Lively · *Data Scientist → Product Manager*

Nov 2019 – Dec 2022

YC-backed HSA and FSA platform for tax-advantaged health spending. Grew from 40 to 140 people, Series B to Series C.

- First and only data hire. Mapped the data model, built the warehouse, and shipped product analytics and executive metrics (AUM, daily volume, invested vs. cash, spend patterns). Promoted to PM in 2021 as the work became the roadmap.
- Designed tiered access to sensitive health-spending data, such as full card numbers and pharmacy purchase details, so more teams could use the data without exposing what they should not see.
- Scoped multi-tenancy with our second partner bank's executives, capturing **~90 bps** more yield on AUM as rates rose.
- Built the partner APIs and migration pipelines that moved **$50M+** in HSA assets between financial institutions with zero data loss and reconciliation intact. Cut the work from two migration teams to one.

Oracle · *Data Scientist, Applied Research*

Sep 2017 – Sep 2019

- Built the eval harness the data science org used before shipping model changes: teams submitted a model, background jobs ran it across demographic, geographic, and product-line slices, and compiled results came back.
- Rebuilt model validation on a representative U.S. population sample, correcting a skew that distorted measured performance. Automated a data pipeline that had taken two analysts full-time.

SELECTED WORK

Brava (bravamade.com). College-recruiting profiles for youth athletes, built with my brother. Ran a COPPA review of minors' data, built the AI pipeline from coach-verified stats to rankings and media, and coded the Stripe checkout with AI agents.

AbiertoClaw (github.com/be-ns/AbiertoClaw). Open-source plugin for the Hermes agent. Each day it finds the best free model that passes a real tool-call test and switches to it, with a local model as the fallback.

SKILLS

Product: discovery, jobs-to-be-done, specs, success metrics, tests/evals as release gates

Data: SQL, Python, data modeling, warehousing, dashboards, experimentation

Sensitive data: PII and health-spending data, tiered access, audit-ready flows, privacy review

AI: RAG, tool use, agents, evals, AI-built internal tools

Writing: Published poet (opol.space, 2026)

EDUCATION

B.A. Communication Studies, Westmont College · Data Science Immersive (ML), Galvanize
