SUMMARY

Product manager for applied AI, with a data-science foundation. I build agentic features people can trust in high-stakes work. I set what an agent may do, gate every release behind an evaluation suite, and keep a person in the loop where a wrong answer is costly. Model choice, grounding, and prompt-response design are things I reason about directly, not hand off. **Outcomes: rebuilt a core product from the ground up that fills vacancies 3–5 days faster with submissions nearly doubled, and \$50M+ moved across institutions.**

Focus: applied LLMs · evals, grounding, human-in-the-loop · 0-to-1 ownership · accuracy-critical products · works closely with engineering and design

EXPERIENCE

AppFolio, Product Manager, Rental Applications

Jan 2023 – Present

- Rebuilt and launched the rental application, from a dead-end form to a modern product. **Vacancies now fill 3–5 days faster and submissions nearly doubled.**
- Shipped reporting and integrations into AppFolio's **AI stack** that gave property managers their first clear view of the lead funnel.
- Run discovery across **50–100 customer conversations a year** and turn what I hear into the roadmap.
- Ship **agentic** features customers can trust: object modeling sets what the agent can do, and an **evaluation suite** gates every release.

Lively, Product Manager

Nov 2019 – Dec 2022

Promoted to Product Manager in 2021 · HSA fintech, SF Bay Area

- Built the partner **APIs and migration pipelines** that moved **\$50M+ in assets** between financial institutions with zero data loss.
- Wrote the data model and integration patterns partners used to onboard a compliant HSA product without building their own infrastructure.
- Built the company's first **data-science** function, then grew the work into product management as the company scaled.

Oracle, Data Scientist, Applied Research

Sep 2017 – Sep 2019

- Built an automated **model-evaluation system** that ran hundreds of tests per model update, so changes shipped on evidence instead of guesswork.

Seifer LLC, Founder

2016

- Founded a men's athletic apparel brand on my own and built all of it, from a carbon-neutral fabric to the 20-month P&L model and the launch process.

SKILLS

PRODUCT

Agentic AI product · JTBD discovery · object modeling (OOUX) · eval design · roadmaps · funnel & conversion · experimentation

DOMAINS

AI-native & vertical SaaS · fintech (financial data, HSAs) · data platforms · applied ML

TECHNICAL

SQL · Python · APIs & system integration · data modeling · ETL / migration pipelines · LLM & agent systems (RAG, tool use, evals)

STRENGTHS

Owns ambiguous problems end to end · ships fast with engineering and design · strong bias for action

EDUCATION & SELECTED WORK

B.A., Communication Studies, Westmont College · 2010–2014 | **Data Science Immersive (ML)**, Galvanize · 2017

Builds and ships free public tools at bensiverly.com (Native Plant Finder, Decision Assist, and three more), each taken from idea to working software.
