Box, Inc. · Redwood City, CA

Dear Box Workflows hiring team,

I build software that fits how people work and takes the worst parts off their plate. That's what your posting describes: turning advanced AI into automation people trust. I'm applying for the **Senior Product Manager, Workflows** role. I don't have a connection inside Box. I'm writing because this is the work I want to do.

At AppFolio I rebuilt a core workflow, the rental application, from a dead-end form into a modern product wired into our AI stack. Vacancies now fill three to five days faster and submissions have nearly doubled. I got there by staying close to customers: I'm in 50 to 100 customer conversations a year, and that's where the roadmap comes from. Before an agentic feature ships, it has to pass an evaluation suite, because people only adopt automation they trust. Your line about championing evaluation frameworks that build trust in AI automation is the work I already do.

I also know how to make integrations real and get people to adopt them. At Lively I built the APIs and migration pipelines that moved **\$50M+ between financial institutions with zero data loss**, and I wrote the data model and patterns partners used to onboard. Getting a customer's team to commit to a new system is close to outbound work, and I've done it: first as a solo founder running my own positioning, launch, and customer acquisition, and since then with every partner I've had to win over.

I'll be straight about the stretch. I've owned products and stayed close to customers, but I haven't yet owned formal sales enablement and deal support. That's the part I most want to take on, and where a founder's feel for positioning and adoption will help. I work AI-first and build my own tools with agentic development on the side. I'm in the Bay Area and glad to be in Redwood City. I'd like to help make Box Automate the workflow layer companies rely on.

Thank you for your time,

Ben Siverly
