

SUMMARY

Data scientist turned product manager. I own the rental application line at AppFolio — 8–9M applications a year across 20k+ property managers — with sole responsibility for strategy and execution. Outside work my brother and I build Brava, recruiting profiles for women's soccer athletes. Nine years from data science to product across fintech and vertical SaaS, customer-embedded and fluent in the data.

EXPERIENCE

AppFolio · Product Manager, Rental Applications

Jan 2023 – Present

- Rebuilt the rental application end to end. Submission rates went from 44% to 70% with a zero change-failure rate, and properties on the new flow fill vacancies 3.4 days faster than offline workflows.
- Rolled out the Zillow prefill partnership to 70% of customers, then made the case to wind it down when the data showed removing friction was lowering applicant quality.
- Shipped follow-up for incomplete applications inside the authenticated app, not over email or text, so every interaction stays auditable for screening compliance. Customer satisfaction scores on rental applications rose 18% after it shipped; AI to trigger the follow-ups automatically is next.
- Sole PM for the application line: strategy and roadmap across the applicant and property-manager experiences, three stakeholder types, and two codebases that have to move together. The payer and the user are different people, and the product has to serve both.
- Built a validated jobs-to-be-done map from 50–100 customer calls a year, synthesized with AI, that ties each product bet directly to filling vacancies — the outcome the business runs on.
- Pioneering a spec-driven way of building with my team: we write down how the product should behave, pressure-test it before any code, and gate every release behind tests and evals.

Lively · Data Scientist → Product Manager

Nov 2019 – Dec 2022

- Built the partner APIs and migration pipelines that moved \$50M+ in HSA assets across financial institutions with zero data loss, cutting the work from two migration teams down to one.
- Built the platform under it — money movement across banks and card networks, processor integrations, ledgers, and the data model partners built on — so they could offer compliant HSA accounts without building the infrastructure themselves.
- Stood up the company's first data-science function and data-services platform; promoted to PM in 2021 as the work became the roadmap.

Oracle · Data Scientist, Applied Research

Sep 2017 – Sep 2019

- Rebuilt the model-validation methodology on a representative U.S. population sample, correcting a data skew that had been distorting how we measured model performance.
- Automated the ad-viewability data pipeline with Python and the JIRA API, replacing extraction and cleaning that had taken two analysts full-time.

SELECTED WORK

Brava (bravamade.com) — recruiting profiles for women's soccer athletes outside the major metros, built with my brother. Coach-verified stats, benchmark rankings, an AI-assisted production pipeline. Designed and shipped end to end: research, product, brand.

AbiertoClaw (github.com/be-ns/AbiertoClaw) — open-source AI assistant over iMessage, built on parental leave to run our family calendar without touching the baby-leave budget. Swappable model sources, a complexity router, and a daily best-free-model picker keep it free by default.

SKILLS

Object modeling (OOUX) · experimentation · SQL · Python · data pipelines & APIs · LLM apps (RAG, tool use)

EDUCATION

B.A. Communication Studies, Westmont College · Data Science Immersive (ML), Galvanize
